

Easy STEM for Teachers!

Recognized around the world for inspiring K-College students with education and resources, Nuevo Foundation is here to help YOU bring STEM into your classroom! Comprised of volunteer professionals across the industry, we can visit your class digitally, in person, or welcome you to our facilities for a visit. Curious what we can do for you? Checkout our programs below!

Our Programs

Coding Workshops

Offered for students of a variety of ages and backgrounds. We have created custom curricula in many languages including Scratch, Python, JavaScript, HTML/CSS, and C# to engage both the analytical and creative sides of a student. Within our curricula we also include a hands-on activity to show different aspects of STEM. Our goal is to make coding fun, engaging, and accessible - and show that anyone can code!

Virtual Sessions

Nuevo Virtual Session is a program where guest speakers from different backgrounds and roles offer live conversations with your classroom or organization. Each session is 30 minutes and it is designed in a way that the guest speaker gets to share their experience in how they got where they are. It's also an opportunity for the students to ask them questions about their role which can be new to them. After our sessions, your students will feel inspired and encouraged to learn more about STEM education.

Speaker Series

Nuevo Speaker Series is a way for our team to share our experience in person with students, teachers, or parents. We share our journey and provide advice on a range of topics from our own STEM personal experience to how you could potentially land a job at a tech company. Throughout all our talks, we strive to increase STEM career awareness and inspire the next generation.

Locations

Our virtual sessions are available anywhere in the world and they are easy to set up! For more hands-on experiences, our facilities are located in Redmond, WA, but our volunteers live around the global! Please contact us to discuss travel arrangements for your classroom or our volunteers.
